Investment20/20 Trainee Job Description

2022 Data Software Development Trainee

Who we're looking for

If you have a passion for technology and keen to learn about the management, usage and distribution of data within the investment management industry then the Schroders Trainee programme is a great starting point for your career.

The Corporate Data team is a technology team with a broad remit to source, master, validate and distribute data to support Schroders' Asset Management business. We are looking for an enthusiastic Data Software Development Trainee to join their team.

About Schroders

We're a global investment manager. We help institutions, intermediaries and individuals around the world invest money to meet their goals, fulfil their ambitions, and prepare for the future.

We have around 5,000 people on six continents. And we've been around for over 200 years, but keep adapting as society and technology changes. What doesn't change is our commitment to helping our clients, and society, prosper.

The base

We moved into our new HQ in the City of London in 2018. We're close to our clients, in the heart of the UK's financial centre. We offer flexible working appropriate for a client-solutions focussed role.

Investment20/20

You will join as part of the Investment20/20 programme, you will have opportunities to meet and network with trainees across the industry and participate in training, socials and insight events.

The team

The team delivers to multiple business areas within the organisation; one day it'll be front office, the next day regulatory, and the following day trade flow. We are needed for various change projects within Corporate Business but also other business areas of Schroders, we're delivering into 30+ projects in 2020 and managing several of our own.

You will join a team of ~10 people. The Data Software Development Trainee will be involved in every stage of the software development lifecycle; working with business and technology stakeholders directly and coordinating with internal analysts and testers to ensure the delivery of data solutions for the business.

We enjoy solving problems together and are focused on delivering value to our clients.

What you'll do

The tasks you will be involved in will include:
- Developing software using various languages and tools
- Helping to design new applications and enhance existing ones using MS Azure Cloud native technologies
- Being part of the agile development team and participating in agile ceremonies
- Participating in DevOps and QA Shift-Left activities
- Supporting the full project lifecycle through to implementation

What you'll be like

If you are passionate about learning to develop and deliver data software solutions and have the following skills and attributes, we would like to hear from you.

- Team oriented, flexible, self-motivated, enthusiastic and willing to learn
- A critical thinker who's able to look at things from different angles
- Great at unpicking a problem, from start to end, own and deliver the solution
- Keen to improve what we do for our clients
- Solid understanding of the Microsoft suite of tools and enjoys working with, and developing, database technology.
